

Phase 8 – Deployment, Documentation and Conclusion

Auto Ticket Classification using Flow Designer

Deployment and Documentation Objective

- Deploy the developed solution to the target environment and finalize project documentation.
- The phase ensures the solution is stable, reusable, ready for demonstration or production use, and supported by complete documentation.

Export the Update Set

- Go to All menus → Search for Local Update Sets.
- Under System Update Sets, select Local Update Sets.
- Open the Project Update Set.
- Change State from In progress to Complete.
- Save the form.
- Under Related Links, click Export to XML.
- The XML-format update set data will be downloaded to the system.
- The downloaded file can be shared through WhatsApp or email and imported into another environment.

Project Outcome

- The Auto Ticket Classification using Flow Designer project delivers an end-to-end automation solution for a school IT helpdesk.
- The primary objective is to reduce manual effort in ticket categorization and improve response efficiency.
- Tickets are automatically classified based on the short description provided by students.
- Dependent choice fields support consistent Category and Subcategory selection.
- Automated email notifications acknowledge ticket creation to the caller.

Maintainability and Future Scope

- The solution is developed using a phased approach with structured configuration and no-code Flow Designer automation.
- The design can be extended with assignment automation, SLA tracking, or predictive intelligence.

Summary

- The project demonstrates how ServiceNow can be used to build a structured, maintainable, and user-friendly ticket automation solution for a school IT helpdesk.
